The diagram illustrates the electrical wiring for a vehicle, featuring a battery (E000) connected to a battery box (BB00). The main power line (2W GY) branches out to several components:

- BB10**: A relay with terminals 1, 2, and 3. It is connected to the battery and the main power line.
- BF00**: A fuse block containing fuses F27 (13W BR) and F23 (9W YL). It is connected to the main power line and the battery.
- SW00**: A switch assembly with terminals 1, 2, and 3. It is connected to the main power line and the battery.
- 8116**: A relay with terminals 1, 2, 3, 4, and 5. It is connected to the main power line and the battery.
- 8110**: A relay with terminals 1, 2, 3, 4, and 5. It is connected to the main power line and the battery.
- 8120A**: A relay with terminals 1 and 2. It is connected to the main power line and the battery.
- V193**: A lamp (V193) connected to the main power line.
- V195**: A lamp (V195) connected to the main power line.
- E020A**: A ground point connected to the main power line.
- E020**: A ground point connected to the main power line.
- E044**: A ground point connected to the main power line.
- E045**: A ground point connected to the main power line.
- E081**: A ground point connected to the main power line.

The diagram also includes a legend for the lamp symbols: a circle with a cross for a standard lamp and a circle with a cross and a plus sign for a high-beam lamp.
