PRECAUTIONS PFP:00001

Precautions for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT **BELT PRE-TENSIONER"**

The Supplemental Restraint System such as "AIR BAG" and "SEAT BELT PRE-TENSIONER", used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Man-

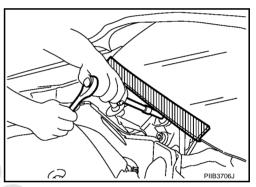

WARNING:

- To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.
- Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.
- Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.

Precautions for Procedures without Cowl Top Cover

ACSODAL F

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.

On Board Diagnostic (OBD) System of CVT and Engine (For Australia)

The ECM has an on board diagnostic system. It will light up the malfunction indicator (MI) to warn the driver of a malfunction causing emission deterioration.

CAUTION:

- Be sure to turn the ignition switch OFF and disconnect the negative battery cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MI to light up.
- Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MI to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)
- Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MI to light up due to the short circuit.
- Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MI to light up due to the malfunction of the fuel injection system, etc.
- Be sure to erase the unnecessary malfunction information (repairs completed) from the TCM and ECM before returning the vehicle to the customer.

Precautions for TCM and CVT Assembly Replacement

ACS00AD8

CAUTION

- Check if new data (Unit ID) are entered correctly after replacing CVT assembly and erasing data in TCM. (Connect CONSULT-II, and then turn ignition switch OFF.)
- When replacing CVT assembly or TCM, refer to the pattern table below and erase the EEPROM in the TCM if necessary.

EEPROM ERASING PATTERNS

CVT assembly	TCM	Erasing EEPROM in TCM	Remarks
Replaced	Replaced	Not required	Not required because the EEPROM in the TCM is in the default state. (CVT assembly must be replaced first.)
Not replaced	Replaced	Not required	Not required because the EEPROM in the TCM is in the default state.
Replaced	Not replaced	Required	Required because data has been written in the EEPROM in the TCM and because the TCM cannot write data from the ROM assembly in the transmission.

METHOD FOR ERASING THE EEPROM IN THE TCM

- 1. Connect CONSULT-II to data link connector. Refer to CVT-48, "CONSULT-II SETTING PROCEDURE".
- 2. Turn ignition switch ON. Confirm that CONSULT-II is turned ON.
- 3. Move selector lever to "R" position.
- Touch "START (NISSAN BASED VHCL)" on CONSULT-II.
- 5. Select "SELF-DIAG RESULTS" mode for "TRANSMISSION" with CONSULT-II.
- 6. Press the brake pedal and turn the brake switch ON.
- 7. Press the accelerator pedal (0.5/8 4/8 throttle) not to exceed the half, and hold it in the half or less open position. (This will set the closed throttle position signal to OFF and the wide open throttle position signal to OFF.)
- 8. Touch "ERASE" on CONSULT-II, and then touch "YES".
- Wait 3 seconds and then release the accelerator pedal.
- 10. Turn ignition switch OFF.

METHOD FOR WRITING DATA FROM THE ROM ASSEMBLY IN THE TRANSAXLE

In the following procedure, the TCM reads data from the ROM assembly and writes it to the EEPROM in the TCM.

- Erase the EEPROM in the TCM.
- 2. Move selector lever to "P" position.
- Turn ignition switch ON.

CHECK METHOD

- Standard: About 2 seconds after the ignition switch ON, the CVT indicator lamp lights up for 2 seconds.
- Non-standard: Even after the ignition switch ON, the CVT indicator lamp does not light up after 2 seconds or illuminates immediately.

CAUTION:

Perform in the "P" or "N" position.

Action for Non-Standard

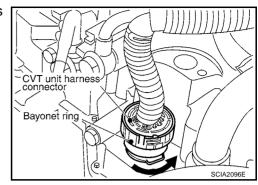

- Replace the CVT assembly.
- Replace the TCM.

WKEGAUFRONS

Removal and Installation Procedure for CVT Unit Connector REMOVAL

ACS00AD9

 Rotate bayonet ring counterclockwise, pull out CVT unit harness connector upward and remove it.

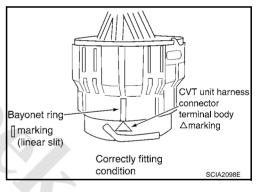

CVI

INSTALLATION

1. Align ∆ marking on CVT unit harness connector terminal body with □ marking on bayonet ring, insert CVT unit harness connector, and then rotate bayonet ring clockwise.

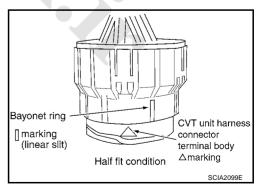

Rotate bayonet ring clockwise until Δ marking on CVT unit harness connector terminal body is aligned with the slit on bayonet ring as shown in the figure (correctly fitting condition), install CVT unit harness connector to CVT unit harness connector terminal body.

CAUTION:

Revision: 2006 December

- ullet Securely align Δ marking on CVT unit harness connector terminal body with bayonet ring slit. Then, be careful not to make a half fit condition as shown in the figure.
- Do not mistake the slit of bayonet ring for other dent portion.

Precautions ACS00ADA

NOTE:

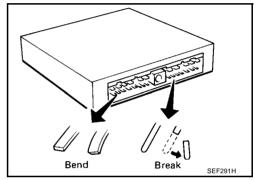

If any malfunction occurs in the RE0F09A model transaxle, replace the entire transaxle assembly.

Before connecting or disconnecting the TCM harness connector, turn ignition switch OFF and disconnect the battery cable from the negative terminal. Because battery voltage is applied to TCM even if ignition switch is turned OFF.

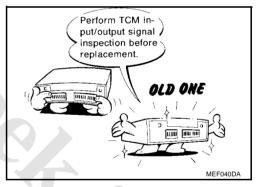

When connecting or disconnecting pin connectors into or from TCM, take care not to damage pin terminals (bend or break).

When connecting pin connectors make sure that there are not any bends or breaks on TCM pin terminal.

- Before replacing TCM, perform TCM input/output signal inspection and make sure whether TCM functions properly or not. Refer to CVT-44, "TCM INSPECTION TABLE".
- After performing each TROUBLE DIAGNOSIS, perform "DTC Confirmation Procedure". If the repair is completed the DTC should not be displayed in the "DTC Confirmation Procedure".
- Always use the specified brand of CVT fluid. Refer to MA-12, "Fluids and Lubricants".
- Use lint-free paper, not cloth rags, during work.
- After replacing the CVT fluid, dispose of the waste oil using the methods prescribed by law, ordinance, etc.

ACS00AKP

Service Notice or Precautions OBD SELF-DIAGNOSIS (FOR AUSTRALIA)

- CVT self-diagnosis is performed by the TCM in combination with the ECM. The results can be read through the blinking pattern of the malfunction indicator (MI). Refer to the table on CVT-48, "Display Item <u>List</u>" for the indicator used to display each self-diagnostic result.
- The self-diagnostic results indicated by the MI are automatically stored in both the TCM and ECM memo-
 - Always perform the procedure on CVT-20, "HOW TO ERASE DTC" to complete the repair and avoid unnecessary blinking of the MI.

For details of OBD, refer to EC-17, "ON BOARD DIAGNOSTIC (OBD) SYSTEM" .

Certain systems and components, especially those related to OBD, may use the new style slidelocking type harness connector. For description and how to disconnect, refer to PG-123, "HAR-**NESS CONNECTOR".**

CVT FLUID PFP:KLE50

Checking CVT Fluid FLUID LEVEL CHECK

ACS00ADE

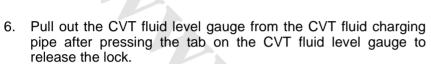

Fluid level should be checked with the fluid warmed up to 50 to 80°C (122 to 176°F). The fluid level check procedure is as follows:

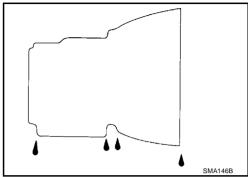

1. Check for fluid leakage.

 With the engine warmed up, drive the vehicle in an urban area. When ambient temperature is 20°C (68°F), it takes about 10 minutes for the CVT fluid to warm up to 50 to 80°C (122 to 176°F).

- 4. Apply parking brake firmly.
- 5. With engine at idle, while depressing brake pedal, move shift selector throughout the entire shift range.

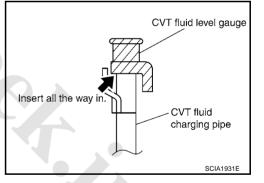

7. Wipe fluid off the CVT fluid level gauge. Insert the CVT fluid level gauge rotating 180° from the originally installed position, then securely push the CVT fluid level gauge until it meets the top end of the CVT fluid charging pipe.

CAUTION:

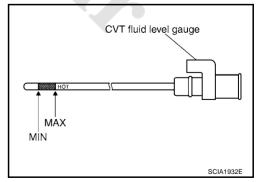

When wiping away the CVT fluid level gauge, always use lint-free paper, not a cloth rag.

8. Place the selector lever in "P" or "N" and make sure the fluid level is within the specified range.

CAUTION:

When reinstalling CVT fluid level gauge, insert it into the CVT fluid charging pipe and rotate it to the original installation position until it is securely locked.

CVT

Α

D

Е

F

G

Н

IZ.

L

I\ /I

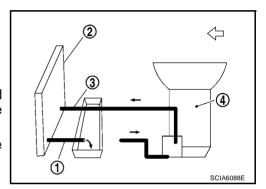

- Check CVT fluid condition.
 - If CVT fluid is very dark or smells burned, check operation of CVT. Flush cooling system after repair of CVT.
 - If CVT fluid contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of CVT. Refer to CO-2, "RADIATOR".

ACS00ADF

Changing CVT Fluid

- 1. Warm up CVT fluid by driving the vehicle for 10 minutes.
- Radiator (2)
- CVT fluid cooler hose [inlet side (3)]
- Transaxle assembly (4)
- 2. Drain CVT fluid from CVT fluid cooler hose [outlet side (1)] and refill with new CVT fluid at CVT fluid charging pipe with the engine running at idle speed.
- 3. Refill until new CVT fluid comes out from CVT fluid cooler hose [outlet side (1)].
 - About 30 to 50% extra fluid will be required for this procedure.

CVT fluid:

Genuine NISSAN CVT fluid NS-2

Fluid capacity:

Approx. 9.8 ℓ (8-5/8 Imp qt)

CAUTION:

- Use only Genuine NISSAN CVT fluid NS-2. Do not mix with other fluid.
- Using CVT fluid other than Genuine NISSAN CVT fluid NS-2 will deteriorate in driveability and CVT durability, and may damage the CVT, which is not covered by the warranty.
- When filling CVT fluid, take care not to scatter heat generating parts such as exhaust.
- Delete CVT fluid deterioration date with CONSULT-II after changing CVT fluid. Refer to CVT-49, "Check CVT Fluid Deterioration Date".
- 4. Check fluid leakage, fluid level and condition.

ON BOARD DIAGNOSTIC TOBE STEM (FOR AUSTRALIA)

ON BOARD DIAGNOSTIC (OBD) SYSTEM (FOR AUSTRALIA)

PFP:00028

Introduction

ACS00AKJ

The CVT system has two self-diagnostic systems.

The first is the emission-related on board diagnostic system (OBD) performed by the TCM in combination with the ECM. The malfunction is indicated by the MI (malfunction indicator) and is stored as a DTC in the ECM memory, and the TCM memory.

The second is the TCM original self-diagnosis performed by the TCM. The malfunction is stored in the TCM memory. The detected items are overlapped with OBD self-diagnostic items. For detail, refer to CVT-48, "Display Item List".

Α

OBD Function for CVT System

The ECM provides emission-related on board diagnostic (OBD) functions for the CVT system. One function is to receive a signal from the TCM used with OBD-related parts of the CVT system. The signal is sent to the ECM when a malfunction occurs in the corresponding OBD-related part. The other function is to indicate a diagnostic result by means of the MI (malfunction indicator) on the instrument panel. Sensors, switches and solenoid valves are used as sensing elements.

The MI automatically illuminates in One or Two Trip Detection Logic when a malfunction is sensed in relation to CVT system parts.

One or Two Trip Detection Logic of OBD ONE TRIP DETECTION LOGIC

ACSODAKI

If a malfunction is sensed during the first test drive, the MI will illuminate and the malfunction will be stored in the ECM memory as a DTC. The TCM is not provided with such a memory function.

TWO TRIP DETECTION LOGIC

When a malfunction is sensed during the first test drive, it is stored in the ECM memory as a 1st trip DTC (diagnostic trouble code) or 1st trip freeze frame data. At this point, the MI will not illuminate. — 1st trip If the same malfunction as that experienced during the first test drive is sensed during the second test drive, the MI will illuminate. — 2nd trip

The "trip" in the "One or Two Trip Detection Logic" means a driving mode in which self-diagnosis is performed during vehicle operation.

OBD Diagnostic Trouble Code (DTC) HOW TO READ DTC AND 1ST TRIP DTC

ACS00AKM

DTC and 1st trip DTC can be read by the following methods.

(P) with CONSULT-II or B GST) CONSULT-II or GST (Generic Scan Tool) Examples: P0705, P0720 etc. These DTC are prescribed by SAE J2012.

(CONSULT-II also displays the malfunctioning component or system.)

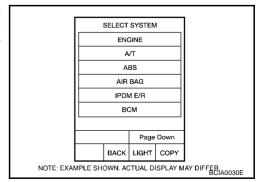

1st trip DTC No. is the same as DTC No.

Revision: 2006 December

Output of the diagnostic trouble code indicates that the indicated circuit has a malfunction. However, in case of the Mode II and GST, they do not indicate whether the malfunction is still occurring or occurred in the past and returned to normal.

CONSULT-II can identify them as shown below, therefore, CONSULT-II (if available) is recommended.

A sample of CONSULT-II display for DTC and 1st trip DTC is shown on the next page. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode for "ENGINE" with CON-SULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.

www.Vardeek.ir

Z50

Н

ON BOARD DIAGNOSTIC (OBD) STSTEM (FOR AUSTRALIA)

If the DTC is being detected currently, the time data will be "0".

		SAT015K

If a 1st trip DTC is stored in the ECM, the time data will be "1t".

SELF-DIAG RES	ULTS	
DTC RESULTS	TIME	
PNP SW/CIRC [P0705]	1 t	
		SAT016K

Freeze Frame Data and 1st Trip Freeze Frame Data

The ECM has a memory function, which stores the driving condition such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed and vehicle speed at the moment the ECM detects a malfunction.

Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data, and the data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM memory along with the 1st trip DTC. There is no priority

ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data, and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MI on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items		
1	Freeze frame data	Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175	
2		Except the above items (Includes CVT related items)	
3	1st trip freeze frame data		

Both 1st trip freeze frame data and freeze frame data (along with the DTC) are cleared when the ECM memory is erased.

HOW TO ERASE DTC

The diagnostic trouble code can be erased by CONSULT-II, GST or ECM DIAGNOSTIC TEST MODE as described following.

- If the battery cable is disconnected, the diagnostic trouble code will be lost within 24 hours.
- When you erase the DTC, using CONSULT-II or GST is easier and quicker than switching the mode selector on the ECM.

The following emission-related diagnostic information is cleared from the ECM memory when erasing DTC related to OBD. For details, refer to EC-18, "Emission-related Diagnostic Information".

- Diagnostic trouble codes (DTC)
- 1st trip diagnostic trouble codes (1st trip DTC)
- Freeze frame data

TROUBLE DIAGNOSIS

PFP:00004

DTC Inspection Priority Chart

ACSONADO

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

NOTE:

Fail-safe

If DTC "U1000 CAN COMM CIRCUIT" is displayed with other DTCs, first perform the trouble diagnosis for "DTC U1000 CAN COMMUNICATION LINE". Refer to CVT-59.

Priority	Detected items (DTC)	
1	U1000 CAN communication line	
2	Except above	

ACS00ADR

The TCM has an electrical fail-safe mode. This mode makes it possible to operate even if there is an error in a main electronic control input/output signal circuit.

FAIL-SAFE FUNCTION

If any malfunction occurs in a sensor or solenoid, this function controls the CVT to make driving possible.

Output Speed Sensor (Secondary Speed Sensor)

The shift pattern is changed in accordance with throttle position when an unexpected signal is sent from the output speed sensor (secondary speed sensor) to the TCM. The manual mode position and second position is inhibited, and the transaxle is put in "D".

Input Speed Sensor (Primary Speed Sensor)

The shift pattern is changed in accordance with throttle position and secondary speed (vehicle speed) when an unexpected signal is sent from the input speed sensor (primary speed sensor) to the TCM. The manual mode position and second position is inhibited, and the transaxle is put in "D".

PNP Switch

If an unexpected signal is sent from the PNP switch to the TCM, the transaxle is put in "D".

Manual Mode Switch

If an unexpected signal is sent from the manual mode switch to the TCM, the transaxle is put in "D".

CVT Fluid Temperature Sensor

If an unexpected signal is sent from the CVT fluid temperature sensor to the TCM, the gear ratio in use before receiving the unexpected signal is maintained or the gear ratio is controlled to keep engine speed under 5,000 rpm.

Transmission Fluid Pressure Sensor A (Secondary Pressure Sensor)

- If an unexpected signal is sent from the transmission fluid pressure sensor A (secondary pressure sensor) to the TCM, the secondary pressure feedback control is stopped and the offset value obtained before the non-standard condition occurs is used to control line pressure.
- If transmission fluid pressure sensor A (secondary pressure sensor) error signal is input to TCM, secondary pressure feedback control stops, but line pressure is controlled normally.

Pressure Control Solenoid A (Line Pressure Solenoid)

If an unexpected signal is sent from the solenoid to the TCM, the pressure control solenoid A (line pressure solenoid) is turned OFF to achieve the maximum fluid pressure.

Pressure Control Solenoid B (Secondary Pressure Solenoid)

If an unexpected signal is sent from the solenoid to the TCM, the pressure control solenoid B (secondary pressure solenoid) is turned OFF to achieve the maximum fluid pressure.

Torque Converter Clutch Solenoid

Revision: 2006 December

If an unexpected signal is sent from the solenoid to the TCM, the torque converter clutch solenoid is turned OFF to cancel the lock-up.

www**cyaraa**ek.ir

CVT

Α

В

F

F

Н

Z50

TROWBYLE THAT HOUSE

Step Motor

If an unexpected signal is sent from the step motor to the TCM, the step motor coil phases "A" through "D" are all turned OFF to hold the gear ratio used right before the non-standard condition occurred.

CVT Lock-up Select Solenoid

If an unexpected signal is sent from the solenoid to the TCM, the CVT lock-up select solenoid is turned OFF to cancel the lock-up.

TCM Power Supply (Memory Back-up)

Transaxle assembly is protected by limiting the engine torque when the memory back-up power supply (for controlling) from the battery is not supplied to TCM. Normal statues is restored when turning the ignition switch OFF to ON after the normal power supply.

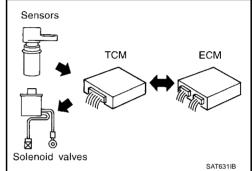

How to Perform Trouble Diagnosis for Quick and Accurate Repair INTRODUCTION

ACS00ADS

Z50

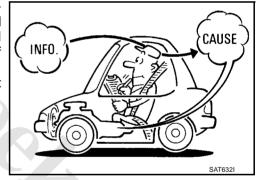

The TCM receives a signal from the vehicle speed sensor, PNP switch and provides shift control or lock-up control via CVT solenoid valves.

Input and output signals must always be correct and stable in the operation of the CVT system. The CVT system must be in good operating condition and be free of valve seizure, solenoid valve malfunction, etc.

It is much more difficult to diagnose an error that occurs intermittently rather than continuously. Most intermittent errors are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

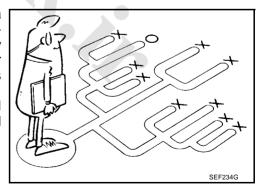

A visual check only may not find the cause of the errors. A road test with CONSULT-II or a circuit tester connected should be performed. Follow the CVT-24, "WORK FLOW".

Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such errors, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A "DIAGNOSTIC WORKSHEET" as shown on the example (Refer to CVT-27) should be used.

Start your diagnosis by looking for "conventional" errors first. This will help troubleshoot driveability errors on an electronically controlled engine vehicle.

Also check related Service bulletins.

WORK FLOW

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate. In general, each customer feels differently about a malfunction. It is important to fully understand the symptoms or conditions for a customer complaint.

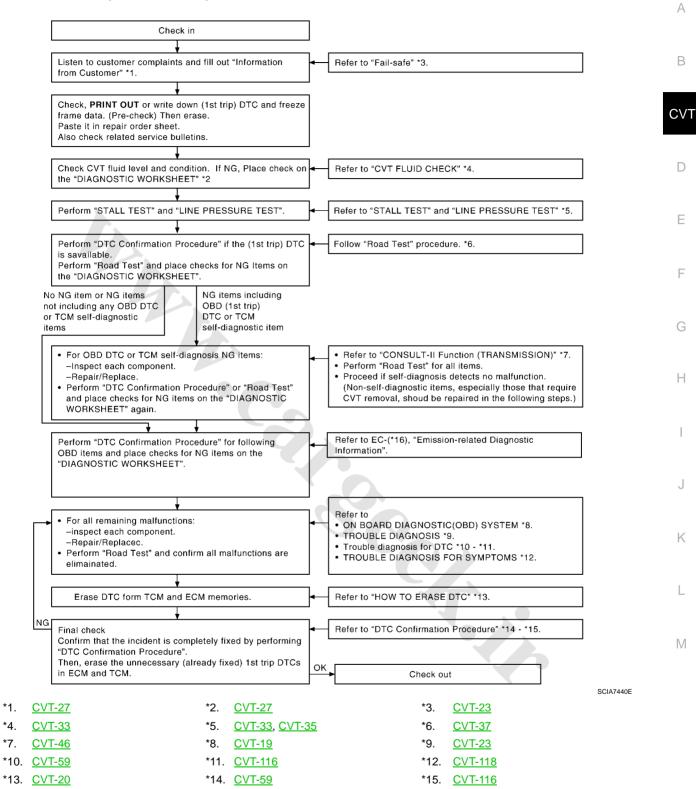

Make good use of the two sheets provided, <u>CVT-27</u>, "<u>Information From Customer</u>" and <u>CVT-27</u>, "<u>Diagnostic Worksheet Chart</u>", to perform the best troubleshooting possible.

Inspections Before Trouble Diagnosis CVT FLUID CHECK

CS00ADV

CVT Fluid Leakage and CVT Fluid Level Check

Inspect for fluid leakage and check the fluid level. Refer to <u>CVT-17</u>, "<u>Checking CVT Fluid</u>".

CVT Fluid Condition Check

Inspect the fluid condition.

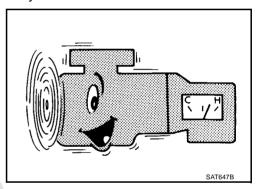

Fluid status	Conceivable cause	Required operation
Varnished (viscous varnish state)	Clutch, brake scorched	Replace the CVT fluid and check the CVT main unit and the vehicle for malfunctions (wire harnesses, cooler pipes, etc.)
Milky white or cloudy	Water in the fluid	Replace the CVT fluid and check for places where water is getting in.
Large amount of metal powder mixed in	Unusual wear of sliding parts within CVT	Replace the CVT fluid and check for improper operation of the CVT.

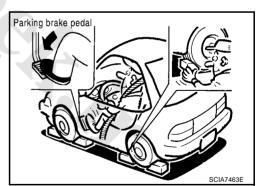

STALL TEST

Stall Test Procedure

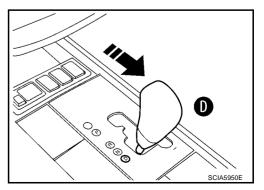

- 1. Inspect the amount of engine oil. Replenish the engine oil if necessary.
- 2. Drive for about 10 minutes to warm up the vehicle so that the CVT fluid temperature is 50 to 80°C (122 to 176°F). Inspect the amount of CVT fluid. Replenish if necessary.

- 3. Securely engage the parking brake so that the tires do not turn.
- 4. Install a tachometer where it can be seen by driver during test.
 - It is good practice to mark the point of specified engine rpm on indicator.

5. Start engine, apply foot brake, and place selector lever in "D" position.

Line Pressure Test Procedure

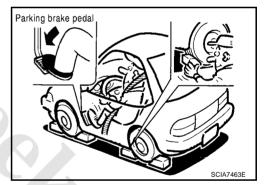

- 1. Inspect the amount of engine oil and replenish if necessary.
- Drive the car for about 10 minutes to warm it up so that the CVT fluid reaches in the range of 50 to 80°C (122 to 176°F), then inspect the amount of CVT fluid and replenish if necessary.

The CVT fluid temperature rises in the range of 50 to 80°C (122 to 176°F) during 10 minutes of driving.

3. After warming up CVT, remove the oil pressure detection plug and install the oil pressure gauge. (Special service tool: ST2505S001)

When using the oil pressure gauge, be sure to use the O-ring attached to the oil pressure detection plug.

4. Securely engage the parking brake so that the tires do not turn.

5. Start the engine, and then measure the line pressure at idle speed.

Keep the brake pedal pressed all the way down during measurement.

6. After the measurements are complete, install the oil pressure detection plug and tighten to the specified torque below.

CAUTION:

Revision: 2006 December

- Do not reuse O-ring.
- Apply CVT fluid to O-ring.

Revision: 2006 December

Judgement of Line Pressure Test

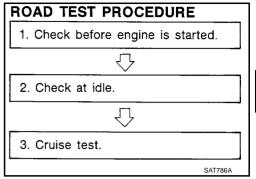

Judgement		Possible cause
		Possible causes include malfunctions in the pressure supply system and low oil pump output. For example
	Low for all positions	Oil pump wear
	("P", "R", "N", "D")	Pressure regulator valve or plug sticking or spring fatigue
		 Oil strainer ⇒ oil pump ⇒ pressure regulator valve passage oil leak
		Engine idle speed too low
Idle speed	Only low for a spe- cific position	Possible causes include an oil pressure leak in a passage or device related to the position after the pressure is distributed by the manual valve.
, , ,		Possible causes include a sensor malfunction or malfunction in the line pressure adjustment function. For example
		Accelerator pedal position signal malfunction
	High	CVT fluid temperature sensor malfunction
		 Pressure control solenoid A (line pressure solenoid) malfunction (sticking in "OFF" state, filter clog, cut line)
		Pressure regulator valve or plug sticking
	Oil pressure does not rise higher than the oil pressure for idle.	Possible causes include a sensor malfunction or malfunction in the pressure adjustment function. For example
		Accelerator pedal position signal malfunction
		TCM malfunction
		 Pressure control solenoid A (line pressure solenoid) malfunction (shorting, sticking in "ON" state)
		Pressure regulator valve or plug sticking
Stall speed	The pressure rises, but does not enter the standard position.	Possible causes include malfunctions in the pressure supply system and malfunction in the pressure adjustment function. For example
		Accelerator pedal position signal malfunction
		Pressure control solenoid A (line pressure solenoid) malfunction (sticking, filter clog)
		Pressure regulator valve or plug sticking
	Only low for a spe- cific position	Possible causes include an oil pressure leak in a passage or device related to the position after the pressure is distributed by the manual valve.

TROWNS ENGREPHOSIS

Road Test ACS00ADW **DESCRIPTION**

The purpose of the test is to determine overall performance of CVT and analyze causes of problems.

- The road test consists of the following three parts:
- "Check Before Engine Is Started" CVT-39.
- "Check at Idle" CVT-39. 2
- 3. "Cruise Test" CVT-41.

Before road test, familiarize yourself with all test procedures and items to check.

Perform tests on all items until specified symptom is found. Troubleshoot items which check out No Good after road test.

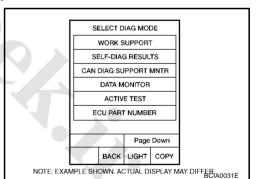

CONSULT-II OPERATION PROCEDURE

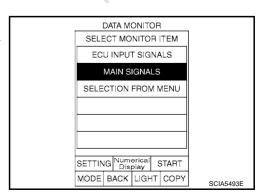

CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which performs CAN communication.

- Using CONSULT-II, perform a cruise test and record the result.
- Print the result and ensure that shifts and lock-ups take place as per Shift Schedule.
- Touch "DATA MONITOR" on "SELECT DIAG MODE" screen.

- Touch "MAIN SIGNALS" to set recording condition.
- 3. See "Numerical Display", "Barchart Display" or "Line Graph Display".
- Touch "START".

TROWNS ENGREPHOSIS

Check Before Engine Is Started

1. CHECK CVT INDICATOR LAMP

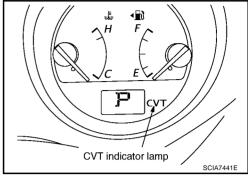

- Park vehicle on flat surface.
- Move selector lever to "P" position. 2.
- Turn ignition switch OFF. Wait at least 5 seconds.
- Turn ignition switch ON. (Do not start engine.)

Does CVT indicator lamp come on for about 2 seconds?

YES >> 1. Turn ignition switch OFF.

- 2. Perform self-diagnosis and note NG items. Refer to CVT-50. "SELF-DIAGNOSTIC RESULT MODE".
- 3. Go to CVT-39. "Check at Idle".

NO >> Stop "Road Test". Go to CVT-125, "CVT Indicator Lamp Does Not Come On".

ACS00ADY

ACS00ADX

Check at Idle

1. CHECK STARTING THE ENGINE

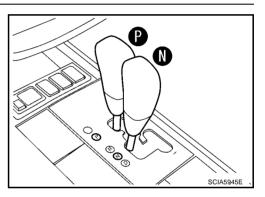

- 1. Park vehicle on flat surface.
- 2. Move selector lever to "P" or "N" position.
- 3. Turn ignition switch OFF.
- Turn ignition switch to START position.

Is engine started?

YES >> GO TO 2.

NO

>> Stop "Road Test". Mark the box on the CVT-27, "DIAG-NOSTIC WORKSHEET" . Go to CVT-126, "Engine Cannot Be Started in "P" or "N" Position".

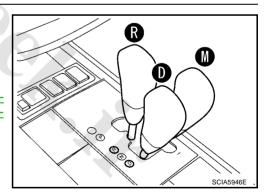

2. CHECK STARTING THE ENGINE

- Turn ignition switch ON.
- Move selector lever to "D", "M" or "R" position.
- Turn ignition switch to START position.

Is engine started?

YES >> Stop "Road Test". Mark the box on the CVT-27, "DIAG-NOSTIC WORKSHEET" . Go to CVT-126, "Engine Cannot Be Started in "P" or "N" Position".

NO >> GO TO 3.

3. CHECK "P" POSITION FUNCTION

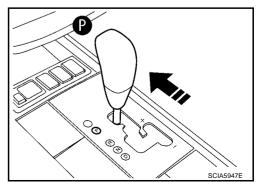

- 1. Move selector lever to "P" position.
- 2. Turn ignition switch OFF.
- Release parking brake. 3.
- Push vehicle forward or backward.
- Apply parking brake.

Does vehicle move when it is pushed forward or backward?

YES >> Mark the box CVT-127, "In "P" Position, Vehicle Moves Forward or Backward When Pushed" on the CVT-27, 'DIAGNOSTIC WORKSHEET" . Continue "Road Test".

NO >> GO TO 4.

Revision: 2006 December

www.Vargeek.ir

CVT

M

Z50

TROWBYLE THAT HOUSES

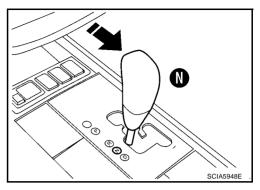

4. CHECK "N" POSITION FUNCTION

- 1. Start engine.
- 2. Move selector lever to "N" position.
- Release parking brake.

Does vehicle move forward or backward?

>> Mark the box "In CVT-127, "In "N" Position, Vehicle Moves" on the CVT-27, "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

NO >> GO TO 5.

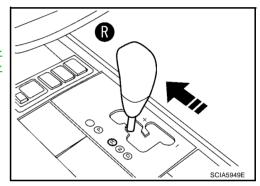

5. CHECK SHIFT SHOCK

- Apply foot brake.
- 2. Move selector lever to "R" position.

Is there large shock when changing from "N" to "R" position?

>> Mark the box <u>CVT-128</u>, "Large Shock "N" → "R" Position" Position" on the CVT-27, "DIAGNOSTIC WORK-SHEET" . Continue "Road Test".

NO >> GO TO 6.

6. CHECK "R" POSITION FUNCTION

Release foot brake for several seconds.

Does vehicle creep backward when foot brake is released?

YES >> GO TO 7.

Revision: 2006 December

>> Mark the box CVT-129, "Vehicle Does Not Creep Backward in "R" Position" on the CVT-27, NO "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

7. CHECK "D" POSITION FUNCTION

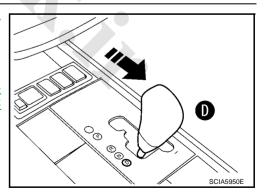

Move selector lever to "D" position and check if vehicle creeps forward.

Does vehicle creep forward in "D" position?

YES >> Go to CVT-41, "Cruise Test".

NO

>> Mark the box CVT-130, "Vehicle Does Not Creep Forward in "D" Position" on the CVT-27, "DIAGNOSTIC WORKSHEET" . Continue "Road Test".

TROWENLE OF FACENTOSIS

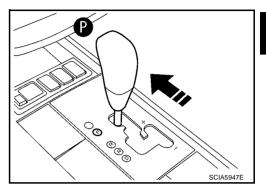

Cruise Test

1. CHECK VEHICLE SPEED WHEN SHIFTING GEARS — PART 1

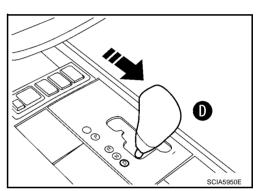

1. Drive vehicle for approximately 10 minutes to warm engine oil and CVT fluid up to operating temperature.

CVT fluid operating temperature: 50 - 80°C (122 - 176°F)

- 2. Park vehicle on flat surface.
- 3. Move selector lever to "P" position.
- 4. Start engine.

5. Move selector lever to "D" position.

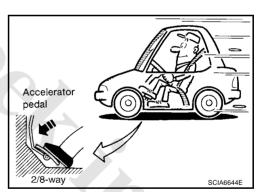

- 6. Accelerate vehicle to 2/8-way throttle depressing accelerator pedal constantly.
 - Read vehicle speed and engine speed. Refer to CVT-43. <a href="Wehicle Speed at Which Gear Shifting Occurs".

OK or NG

OK >> GO TO 2.

NG >> Mark the box of $\underline{\text{CVT-131, "CVT Does Not Shift"}}$ on the $\underline{\text{CVT-27, "DIAGNOSTIC WORKSHEET"}}$. Continue

"Road Test".

- 3. Accelerate vehicle to full depression depressing accelerator pedal constantly.
 - Read vehicle speed and engine speed. Refer to CVT-43. "Vehicle Speed at Which Gear Shifting Occurs".

OK or NG

OK >> GO TO 3.

NG >> Mark the

>> Mark the box of <u>CVT-131</u>, "<u>CVT Does Not Shift"</u> on the <u>CVT-27</u>, "<u>DIAGNOSTIC WORKSHEET"</u>. Continue "Road Test".

3. CHECK MANUAL MODE FUNCTION

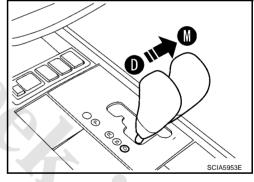

Move to manual mode from "D" position.

Does it switch to manual mode?

YES >> GO TO 4.

NO >> Mark the

>> Mark the box of <u>CVT-132</u>, "Cannot Be Changed to Manual Mode" on the <u>CVT-27</u>, "DIAGNOSTIC WORK-SHEET". Continue "Road Test".

4. CHECK SHIFT-UP FUNCTION

During manual mode driving, is upshift from M1 \to M2 \to M3 \to M4 \to M5 \to M6 performed?

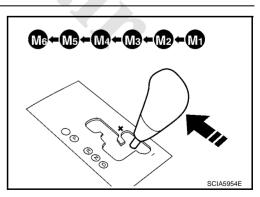

Read the gear position. Refer to <u>CVT-55</u>, "<u>DATA MONITOR</u> <u>MODE"</u>.

Is upshifting correctly performed?

YES >> GO TO 5.

NO >> Mark the

>> Mark the box of <u>CVT-132</u>, "<u>CVT Does Not Shift in Manual Mode</u>" on the <u>CVT-27</u>, "<u>DIAGNOSTIC WORK-SHEET</u>". Continue "Road Test".

Z50

TROWEN-POLARSKOSIS

5. CHECK SHIFT-DOWN FUNCTION

During manual mode driving, is downshift from M6 \to M5 \to M4 \to M3 \to M2 \to M1 performed?

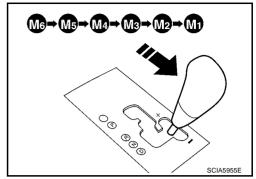

Read the gear position. Refer to <u>CVT-55</u>, "<u>DATA MONITOR</u> <u>MODE"</u>.

Is downshifting correctly performed?

YES >> GO TO 6.

NO

>> Mark the box of <u>CVT-132</u>, "<u>CVT Does Not Shift in Manual Mode</u>" on the <u>CVT-27</u>, "<u>DIAGNOSTIC WORK-SHEET</u>". Continue "Road Test".

6. CHECK ENGINE BRAKE FUNCTION

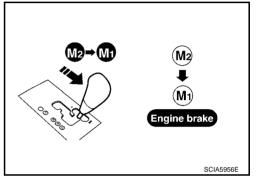

Check engine brake.

Does engine braking effectively reduce speed in M1 position?

YES >> 1. Stop the vehicle.

2. Perform self-diagnosis. Refer to <u>CVT-50</u>, <u>"SELF-DIAGNOSTIC RESULT MODE"</u>.

NO >> Mark the box of <u>CVT-134</u>, "<u>Vehicle Does Not Decelerate</u> by <u>Engine Brake"</u> on the <u>CVT-27</u>, "<u>DIAGNOSTIC</u> WORKSHEET" . then continue trouble diagnosis.

Vehicle Speed at Which Gear Shifting Occurs

Numerical value data are reference values.

Engine type	Throttle position	Shift pattern	Engine sp	eed (rpm)
Liigilie type	Throttle position	Onlin pattern	At 40 km/h (25 MPH)	At 60 km/h (37 MPH)
VQ35DE	8/8	"D" position	2,800 - 4,300	3,900 - 5,300
	2/8	"D" position	1,200 - 2,000	1,300 - 2,100

CAUTION:

Lock-up clutch is engaged when vehicle speed is approximately 18 km/h (11 MPH) to 90 km/h (56 MPH).

DTC U1000 CAN CONTRIBILITY OF LINE

DTC U1000 CAN COMMUNICATION LINE

PFP:23710

Description

4CC004E3

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent malfunction detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CVT

D

F

Н

Α

On Board Diagnosis Logic

CS00AE4

Diagnostic trouble code "U1000 CAN COMM CIRCUIT" with CONSULT-II is detected when TCM cannot communicate to other control units.

ACS00AE5

Possible Cause

Harness or connectors (CAN communication line is open or shorted.)

DTC Confirmation Procedure

ACS00AF6

NOTE:

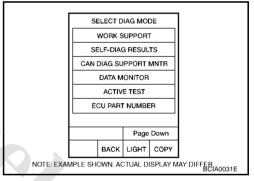

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

(P) WITH CONSULT-II

1. Turn ignition switch ON. (Do not start engine.)

- 2. Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine and wait for at least 6 seconds.
- If DTC is detected, check possible cause items.

WITH GST

Follow the procedure "WITH CONSULT-II".

TCM Input/Output Signal Reference Values

ACS00AKR

TCM terminal data are reference values, measured between each terminal and ground.

DTC P0615 START SRENAL CIRCUIT

DTC P0615 START SIGNAL CIRCUIT

PFP:25230

Description

ACS00AF9

Α

В

CVT

F

Н

- TCM controls starter relay in IPDM E/R.
- TCM switches starter relay ON at "P" or "N" position and allows to crank engine.
- Then it prohibits cranking other than at "P" or "N" position.

CONSULT-II Reference Value

ACS00AFA

Remarks: Specification data are reference values

Item name	Condition	Display value
STRTR RLY OUT	Selector lever in "P", "N" positions	ON
STRTR REL OUT	Selector lever in other positions	OFF
STRTR RLY MON	Selector lever in "P", "N" positions	ON
SININ NLI WON	Selector lever in other positions	OFF

On Board Diagnosis Logic

ACS00AFB

Diagnostic trouble code "P0615 STARTER RELAY/CIRC" with CONSULT-II is detected when starter relay switched ON other than at "P" or "N" position. (Or when switched OFF at "P" or "N" position).

Possible Cause

ACS00AEC

Harness or connectors (Starter relay and TCM circuit is open or shorted.)

Starter relav

DTC Confirmation Procedure

ACSONAFD

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

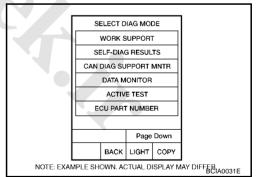

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

(WITH CONSULT-II

Revision: 2006 December

- Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine.
- 4. Drive vehicle for at least 2 consecutive seconds.
- If DTC is detected, check possible cause items.

TCM Input/Output Signal Reference Values

IIVIT SVV2	Selector lever in "P", "R" positions	OFF
INH SW1	Selector lever in "R", "N" and "D" positions	ON
IIVI I OVV I	Selector lever in "P" position	OFF

On Board Diagnosis Logic

ACS00AE0

Diagnostic trouble code "P0705 PNP SW/CIRC" with CONSULT-II is detected under the following conditions.

- When TCM does not receive the correct voltage signal from the PNP switches 1, 2, 3 and 4 based on the gear position.
- When the signal from monitor terminal of PNP switch 3 is different from PNP switch 3.

Possible Cause

- Harness or connectors (PNP switches 1, 2, 3, 4 and TCM circuit is open or shorted.)
- PNP switches 1, 2, 3 and 4
- PNP switch 3 monitor terminal is open or shorted

DTC Confirmation Procedure

ACS00AEQ

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

Revision: 2006 December www.Vargeek.ir Z50

DTC P0705 PARKYWE PPRATE OSITION SWITCH

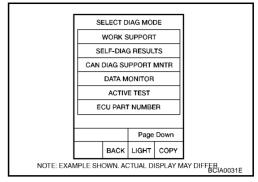

(A) WITH CONSULT-II

- 1. Turn ignition switch ON. (Do not start engine.)
- 2. Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- 3. Start engine.
- 4. Drive vehicle and maintain the following conditions for at least 2 consecutive seconds.

VEHICLE SPEED: More than 10 km/h (6 MPH)

ENG SPEED: More than 450 rpm ACC PEDAL OPEN: More than 1.0/8

5. If DTC is detected, check possible cause items.

WITH GST

Follow the procedure "WITH CONSULT-II".

DTC P0710 CVT FLUID WEMPERSCHURE SENSOR CIRCUIT

DTC P0710 CVT FLUID TEMPERATURE SENSOR CIRCUIT

PFP:31020

Description

ACS00AFU

The CVT fluid temperature sensor detects the CVT fluid temperature and sends a signal to the TCM.

CONSULT-II Reference Value

ACS00AEV

Remarks: Specification data are reference values.

Item name	Condition	Display value (Approx.)
ATF TEMP SEN	Cold [20°C (68°F)]	1.8 - 2.0 V
ATT TEMP SEN	Hot [80°C (176°F)]	0.6 - 1.0 V

On Board Diagnosis Logic

ACS00AFW

Diagnostic trouble code "P0710 ATF TEMP SEN/CIRC" with CONSULT-II is detected when TCM receives an excessively low or high voltage from the sensor.

Possible Cause

- Harness or connectors (Sensor circuit is open or shorted.)
- CVT fluid temperature sensor

DTC Confirmation Procedure

ACS00AEY

CAUTION:

Always drive vehicle at a safe speed.

NOTE

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

(P) WITH CONSULT-II

- 1. Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine and maintain the following conditions for at least 10 minutes (Total).

VEHICLE SPEED: 10 km/h (6 MPH) or more

ENG SPEED: 450 rpm more than ACC PEDAL OPEN: More than 1.0/8

RANGE: "D" position

4. If DTC is detected, check possible cause items.

DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

PFP:31940

Description

ACS00AFS

- The torque converter clutch solenoid valve is activated by the TCM in response to signals sent from the vehicle speed and throttle position sensors. Lock-up piston operation will then be controlled.
- Lock-up operation, however, is prohibited when CVT fluid temperature is too low.
- When the accelerator pedal is depressed (less than 2/8) in lock-up condition, the engine speed should not change abruptly. If there is a big jump in engine speed, there is no lock-up.

CONSULT-II Reference Value

ACS00AFT

Remarks: Specification data are reference values.

Item name	Condition	Display value (Approx.)	
ISOLT1	Lock-up OFF	0.0 A	
IGOLIT	Lock-up ON	0.7 A	

On Board Diagnosis Logic

ACS00AFU

Diagnostic trouble code "P0740 TCC SOLENOID/CIRC" with CONSULT-II is detected under the following conditions.

TCM detects an improper voltage drop when it tries to operate the solenoid valve.

Possible Cause

- Torque converter clutch solenoid valve
- Harness or connectors (Solenoid circuit is open or shorted.)

DTC Confirmation Procedure

ACS00AFW

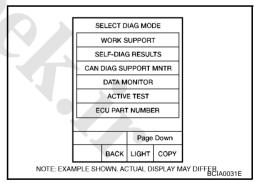

NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

(II) WITH CONSULT-II

- 1. Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II and wait at least 10 consecutive seconds.
- 3. If DTC is detected, check possible cause items.

WITH GST

Follow the procedure "WITH CONSULT-II".

TCM Input/Output Signal Reference Values

ACS00AKX

TCM terminal data are reference values, measured between each terminal and ground.

DTC P0744 A/T TCC S/V FUNCTION (LOCK-UP)

PFP:31940

Description

ACSONAGO

Α

CVT

Е

This malfunction is detected when the torque converter clutch does not lock-up as instructed by the TCM. This is not only caused by electrical malfunction (circuits open or shorted), but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

CONSULT-II Reference Value

ACS00AG1

Remarks: Specification data are reference values.

Item name	Condition	Display value
ENG SPEED SIG	Engine running	Closely matches the tachometer reading.
PRI SPEED SEN	During driving (lock-up ON)	Approximately matches the engine speed.

On Board Diagnosis Logic

ACS00AG2

Diagnostic trouble code "P0744 A/T TCC S/V FNCTN" with CONSULT-II is detected under the following conditions.

- When CVT cannot perform lock-up even if electrical circuit is good.
- When TCM compares difference value with slip revolution and detects an irregularity.

Possible Cause

- Torque converter clutch solenoid valve
- Hydraulic control circuit

DTC Confirmation Procedure

ACS00AG4

CAUTION:

Always drive vehicle at a safe speed.

Description

ACS00AGY

Manual mode switch is installed in CVT control device. The manual mode switch sends shift up and shift down switch signals to TCM.

TCM sends the switch signals to unified meter and A/C amp via CAN communication line. Then manual mode switch position is indicated on the CVT position indicator. For inspection, refer to CVT-117, "CVT INDICATOR CIRCUIT".

CONSULT-II Reference Value

ACS00AGZ

Item name Condition		Display value
MMODE	Manual shift gate position (neutral)	ON
WIWODL	Other than the above	OFF
NON MMODE	Manual shift gate position (neutral, +side, -side)	OFF
NON WIWODE	Other than the above	ON
UPLVR	Select lever: + side	ON
OFLVIK	Other than the above	OFF
DOWNLVR	Select lever: - side	ON
DOWNLYK	Other than the above	OFF

On Board Diagnosis Logic

ACS00AH0

Diagnostic trouble code "P0826 MANUAL MODE SWITCH" with CONSULT-II is detected when TCM monitors Manual mode, Non manual mode, Up or Down switch signal, and then detects irregular with impossible input pattern for 1 second or more.

Possible Cause

- Harness or connectors
 - (These switches circuit is open or shorted.)
 - (TCM, and unified meter and A/C amp circuit are open or shorted.)
 - (CAN communication line is open or shorted.)
- Manual mode select switch (Built into CVT control device)
- Manual mode position select switch (Built into CVT control device)

DTC Confirmation Procedure

ACS00AH2

Z50

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC Confirmation Procedure" has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

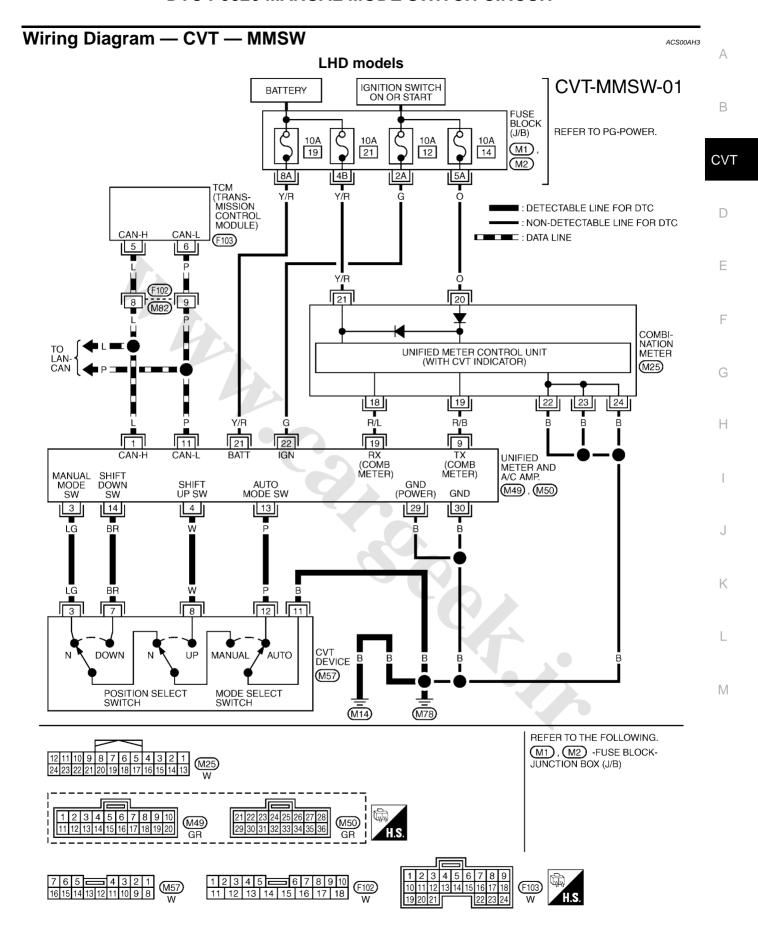

After the repair, perform the following procedure to confirm the malfunction is eliminated.

(I) WITH CONSULT-II

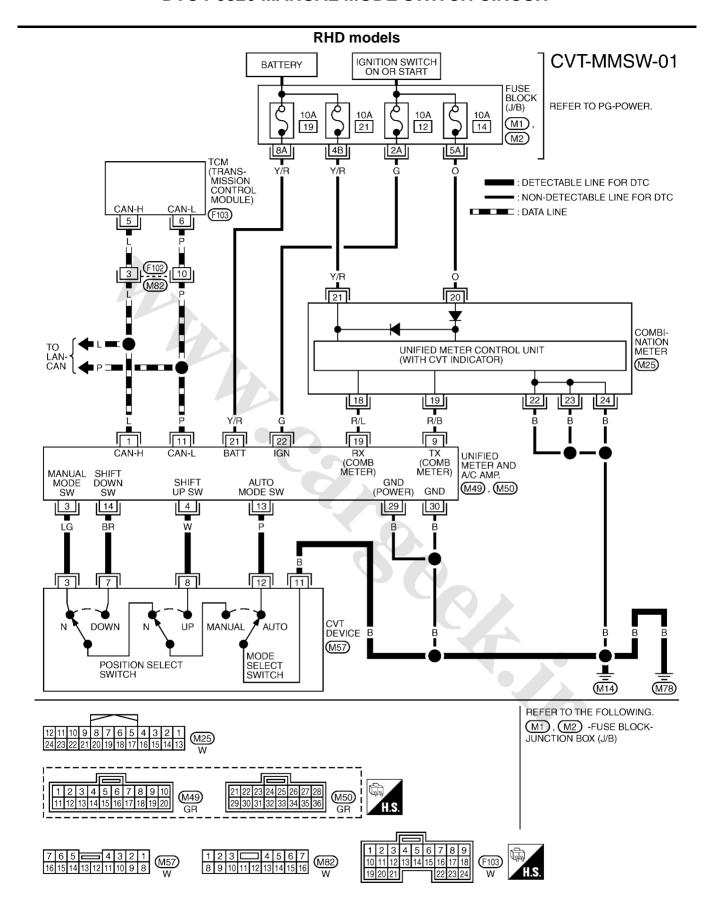

- 1. Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine.
- 4. Move selector lever to "M" position.
- 5. Drive vehicle for at least 2 consecutive seconds.
- If DTC is detected, check possible cause items.

DTC P0840 TRANSMISSION FLUID PRESSURE SENSOR A CIRCUIT (SEC PRESSURE SENSOR)

DTC P0840 TRANSMISSION FLUID PRESSURE SENSOR A CIRCUIT (SEC PRESSURE SENSOR) PFP:31936

Description ACSODAHA

The transmission fluid pressure sensor A (secondary pressure sensor) detects secondary pressure of CVT and sends TCM the signal.

CONSULT-II Reference Value

Remarks: Specification data are reference values.

Item name	Condition	Display value (Approx.)
SEC HYDR SEN	"N" position idle	0.8 - 1.0 V
SEC PRESS	iv position raic	0.5 - 0.9 MPa

On Board Diagnosis Logic

ACS00AH8

Diagnostic trouble code "P0840 TR PRS SENS/A CIRC" with CONSULT-II is detected when TCM detects an improper voltage drop when it receives the sensor signal.

Possible Cause ACS00AH9

- Transmission fluid pressure sensor A (Secondary pressure sensor)
- Harness or connectors (Switch circuit is open or shorted.)

DTC Confirmation Procedure

ACSODAHA

NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

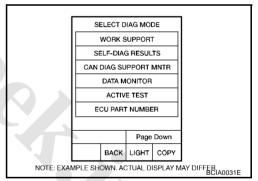

(P) WITH CONSULT-II

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Make sure that output voltage of line temperature sensor is within the range below.

ATF TEMP SEN: 1.0 - 2.0 V

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

- Start engine and wait for at least 5 consecutive seconds.
- If DTC is detected, check possible cause items.

WITH GST

Follow the procedure "WITH CONSULT-II".

Revision: 2006 December www.tertolek.ir Z50

DTC P1723 CVY SPEED SENSOR FUNCTION

DTC P1723 CVT SPEED SENSOR FUNCTION

PFP:31907

Description The vehicle speed sensor CVT [output speed sensor (secondary speed sensor)] detects the revolution of the idler gear parking pawl lock gear and generates a pulse signal. The pulse signal is sent to the TCM, which

Α

CVT

F

Н

M

Z50

converts it into vehicle speed. The input speed sensor (primary speed sensor) detects the primary pulley revolution speed and sends a signal to the TCM.

On Board Diagnosis Logic

Diagnostic trouble code "P1723 CVT SPD SEN/FNCTN" with CONSULT-II is detected when there is a great difference between the vehicle speed signal and the secondary speed sensor signal.

One of the "P0720 VEH SPD SEN/CIR AT", the "P0715 INPUT SPD SEN/CIRC" or the "P0725 ENGINE SPEED SIG" is displayed with the DTC at the same time.

Possible Cause ACS00AIG

- Harness or connectors (Sensor circuit is open or shorted.)
- Output speed sensor (Secondary speed sensor)
- Input speed sensor (Primary speed sensor)
- Engine speed signal system

DTC Confirmation Procedure

ACS00AIH

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

(A) WITH CONSULT-II

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine and maintain the following conditions for at least 5 consecutive seconds.

VEHICLE SPEED: 10 km/h (6 MPH) or more

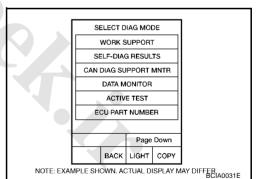

ACC PEDAL OPEN: More than 1.0/8

RANGE: "D" position

ENG SPEED: 450 rpm or more

Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.

If DTC is detected, check possible cause items.

www.karbeek.ir

DTC P1726 ELECTRYC THROTTE CONTROL SYSTEM

DTC P1726 ELECTRIC THROTTLE CONTROL SYSTEM

PFP:23710

Description ACS00ALI

Electric throttle control actuator consists of throttle control motor, accelerator pedal position sensor, throttle position sensor etc. The actuator sends a signal to the ECM, and ECM sends the signal to TCM with CAN communication.

On Board Diagnosis Logic

ACS00AIK

Diagnostic trouble code "P1726 ELEC TH CONTROL" with CONSULT-II is detected when the electronically controlled throttle for ECM is malfunctioning.

Possible Cause ACS00AIL

Harness or connectors (Sensor circuit is open or shorted.)

DTC Confirmation Procedure

ACSODAIM

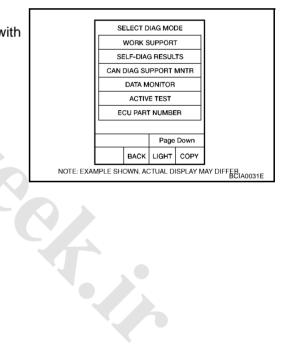

NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

(II) WITH CONSULT-II

- Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with 2. CONSULT-II.
- Start engine and let it idle for 5 second. 3.
- If DTC is detected, check possible cause items.

DTC P1740 LOCK-UP SEVER SOLENOID VALVE CIRCUIT

DTC P1740 LOCK-UP SELECT SOLENOID VALVE CIRCUIT

PFP:31941

Description

ACSONAIO

Α

CVT

- Lock-up select solenoid valve controls lock-up clutch pressure or forward clutch pressure (reverse brake pressure).
- When controlling lock-up clutch, the valve is turned OFF. When controlling forward clutch, it is turned ON.

CONSULT-II Reference Value

Item name	Condition	Display value
LUSEL SOL OUT	Selector lever in "P", "N" positions	ON
	Wait at least for 5 seconds with the selector lever in "R", "D" positions	OFF

On Board Diagnosis Logic

Diagnostic trouble code "P1740 LU-SLCT SOL/CIRC" with CONSULT-II is detected under the following conditions.

When TCM compares target value with monitor value and detects an irregularity.

Possible Cause

ACS00AIR

- Lock-up select solenoid valve
- Harness or connectors
- (Solenoid circuit is open or shorted.)

DTC Confirmation Procedure

ACSODAIS

Н

CAUTION:

Always drive vehicle at a safe speed.

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

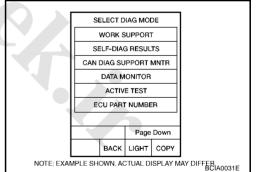

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

(A) WITH CONSULT-II

- Turn ignition switch ON. (Do not start engine.)
- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine and maintain the following conditions for at least 5 consecutive seconds.

RANGE: "D" position and "N" position (At each time, wait for 5 seconds.)

If DTC is detected, check possible cause items.

- Always drive vehicle at a safe speed.
- Before starting "DTC Confirmation Procedure", confirm "Hi" or "Mid" or "Low" fixation by "PRI SPEED" and "VEHICLE SPEED" on "DATA MONITOR MODE".
- If hi-geared fixation occurred, check possible cause items.

NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, touch "ERASE" on "SELF-DIAG RESULTS" and then perform the following procedure to confirm the malfunction is eliminated.

(P) WITH CONSULT-II

- Turn ignition switch ON and select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Make sure that output voltage of CVT fluid temperature sensor is within the range below.

ATF TEMP SEN: 1.0 - 2.0 V

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

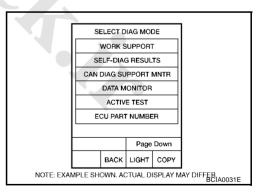

- Select "DATA MONITOR" mode for "TRANSMISSION" with CONSULT-II.
- Start engine and maintain the following conditions for at least 30 consecutive seconds.

TEST START FROM 0 km/h (0 MPH). CONSTANT ACCELERATION: Keep 30 sec or more. VEHICLE SPEED: 10 km/h (6 MPH) or more. ACC PEDAL OPEN: More than 1.0/8. RANGE: "D" position. ENG SPEED: 450 rpm or more.

5. If DTC is detected, check possible cause items.

WITH GST

Follow the procedure "WITH CONSULT-II".

CVT WWWCATGREENIN TVD

CVT INDICATOR CIRCUIT

PFP:24810

Description

ACS00AJF

TCM sends the switch signals to unified meter and A/C amp via CAN communication line. Then manual mode switch position is indicated on the CVT indicator.

TROUBLE DIWON OSIS FOR SYMPTOMS

CVT Indicator Lamp Does Not Come On SYMPTOM:

ACS00AJJ

CVT indicator lamp does not come on for about 2 seconds when turning ignition switch to ON.

DIAGNOSTIC PROCEDURE

1. CHECK CAN COMMUNICATION LINE

Perform the self-diagnosis check. Refer to CVT-50, "SELF-DIAGNOSTIC RESULT MODE".

Is any malfunction of the "U1000 CAN COMM CIRCUIT" indicated in the results?

YES >> Check CAN communication line. Refer to CVT-59, "DTC U1000 CAN COMMUNICATION LINE" .

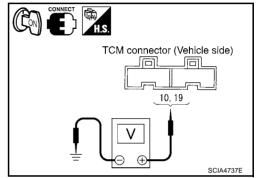

NO >> GO TO 2.

2. CHECK TCM POWER SOURCE

1. Turn ignition switch ON.

2. Check voltage between TCM connector terminals and ground. Refer to CVT-103, "Wiring Diagram — CVT — POWER".

Name	Connec- tor	Terminal	Voltage (Approx.)
Power supply	F103	10 19	Battery voltage

OK or NG

OK >> GO TO 4. NG >> GO TO 3.

3. DETECT MALFUNCTIONING ITEM

Check the following.

- Harness for short or open between ignition switch and TCM connector terminal 10, 19
 Refer to CVT-103, "Wiring Diagram CVT POWER".
- 10 A fuse (No.83, located in the IPDM E/R). Refer to <u>CVT-103, "Wiring Diagram CVT POWER"</u>.
- Ignition switch. Refer to PG-4, "POWER SUPPLY ROUTING CIRCUIT".

OK or NG

OK >> GO TO 4.

NG >> Repair or replace damaged parts.

4. CHECK TCM GROUND CIRCUIT

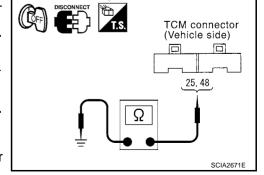

- 1. Turn ignition switch OFF.
- 2. Disconnect TCM connector.
- 3. Check continuity between TCM connector terminal and ground. Refer to CVT-103, "Wiring Diagram CVT POWER".

Name	Connec- tor	Terminal	Continuity
Ground	F104	25	Yes
	1 104	48	165

OK or NG

OK >> GO TO 5.

NG >> Repair open circuit or short to ground or short to power in harness or connectors.

K

M

TROUBLE DYNGN 6819 FOR SYMPTOMS

5. DETECT MALFUNCTIONING ITEM

Check the following.

 Harness and fuse for short or open between ignition switch and CVT indicator lamp Refer to PG-4. "POWER SUPPLY ROUTING CIRCUIT".

OK or NG

OK >> GO TO 6.

NG >> Repair or replace damaged parts.

6. CHECK SYMPTOM

Check again. Refer to CVT-39, "Check Before Engine Is Started".

OK or NG

OK >> INSPECTION END

NG >> GO TO 7.

7. CHECK COMBINATION METERS

Check combination meters.

Refer to DI-5, "COMBINATION METERS".

OK or NG

OK >> INSPECTION END

NG >> Repair or replace damaged parts.

Engine Cannot Be Started in "P" or "N" Position SYMPTOM:

ACS00AJK

- Engine cannot be started with selector lever in "P" or "N" position.
- Engine can be started with selector lever in "D", "M" or "R" position.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis check. Refer to CVT-50, "SELF-DIAGNOSTIC RESULT MODE".

Do the self-diagnostic results indicate PNP switch circuit or start signal circuit?

YES >> Check PNP switch circuit or start signal circuit. Refer to CVT-64, "DTC P0705 PARK/NEUTRAL POSITION SWITCH" or CVT-61, "DTC P0615 START SIGNAL CIRCUIT".

NO >> GO TO 2.

2. CHECK CONTROL CABLE

Check control cable. Refer to CVT-137, "Checking of CVT Position"

OK or NG

OK >> GO TO 3.

NG >> Adjust control cable. Refer to CVT-137, "Adjustment of CVT Position".

3. CHECK STARTING SYSTEM

Check starting system. Refer to SC-4, "STARTING SYSTEM".

OK or NG

OK >> INSPECTION END

NG >> Repair or replace damaged parts.

Revision: 2006 December www.tartyeek.ir Z50

TROUBLE DYWGN 6818 400 R'SYMPTOMS

5. CHECK TCM

- 1. Check TCM input/output signals. Refer to CVT-43, "TCM Input/Output Signal Reference Values".
- 2. If NG, re-check TCM pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace the transaxle assembly. Refer to CVT-153, "Removal and Installation".

NG >> Repair or replace damaged parts.

Large Shock "N" → "R" Position SYMPTOM:

ACS00AJN

Z50

There is large shock when shifting from "N" to "R" position.

DIAGNOSTIC PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Perform self-diagnosis check. Refer to CVT-50, "SELF-DIAGNOSTIC RESULT MODE".

Is any malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system. Refer to CVT-50, "Display Items List".

NO >> GO TO 2.

2. CHECK ENGINE IDLE SPEED

Check engine idle speed. Refer to <u>EC-43, "Basic Inspection"</u> (TYPE 1*), <u>EC-293, "Basic Inspection"</u> (TYPE 2*).

*: Refer to EC-9, "APPLICATION NOTICE"

OK or NG

OK >> GO TO 3. NG >> Repair.

3. CHECK CVT FLUID LEVEL

Check CVT fluid level. Refer to CVT-17, "Checking CVT Fluid".

OK or NG

OK >> GO TO 4. NG >> Refill CVT fluid.

4. CHECK LINE PRESSURE

Check line pressure at idle. Refer to CVT-35, "LINE PRESSURE TEST" .

OK or NG

OK >> GO TO 5.

NG >> Check the malfunctioning item. Refer to CVT-36, "Judgement of Line Pressure Test".

5. CHECK SYMPTOM

Check again. Refer to CVT-39, "Check at Idle".

OK or NG

OK >> INSPECTION END

NG >> GO TO 6.

Revision: 2006 December

6. CHECK TCM

- 1. Check TCM input/output signals. Refer to CVT-43, "TCM Input/Output Signal Reference Values".
- 2. If NG, re-check TCM pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> Replace the transaxle assembly. Refer to CVT-153, "Removal and Installation".

NG >> Repair or replace damaged parts.

SHIFT CONTROLS Y'STEM

CONTROL CABLE COMPONENTS

Refer to the figure below for control cable removal and installation procedure.

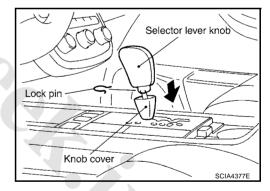

- 1. Selector lever knob
- 4. Bracket
- 7. Transaxle assembly
- 2. Control device assembly
- 5. Control cable

- Lock plate
- 6. Lock plate

REMOVAL

Remove shift control system. Refer to the followings and the figure.

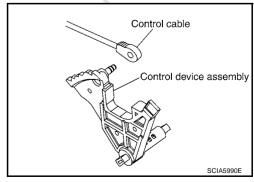

- The followings are the procedure for removing selector lever knob.
- Remove knob cover below selector lever downward.
- Pull lock pin out of selector lever knob.
- Remove selector lever knob.

INSTALLATION

Note the following, and install in the reverse order of removal.

- The knurled surface of rib should be upward when installing the control cable to the control device assembly. And insert the control cable securely.
- After installation is completed, adjust and check CVT position. Refer to <u>CVT-137</u>, "<u>Adjustment of CVT Position</u>" and <u>CVT-137</u>, "<u>Checking of CVT Position</u>".

SHIFTY CONTEX GESYSTEM

Adjustment of CVT Position

ACS00AKH

- 1. Place selector lever in "P" position.
- 2. Loosen control cable nut and place manual lever in "P" position.

CAUTION:

Turn wheels more than 1/4 rotations and apply the park lock.

- Hold the control cable at the end. Push and pull it twice or three times, and then push it with a load of 9.8N (approximately 1 kg, 2.2 lb). Temporarily tighten the lock nut with the control cable loose.
- 4. Connect control cable on manual lever.

CAUTION:

No application of a force to the manual lever.

5. Tighten control cable nut.

CAUTION:

Revision: 2006 December

Fix the manual lever when tightening.

: 13 N·m (1.3 kg-m, 10 ft-lb)

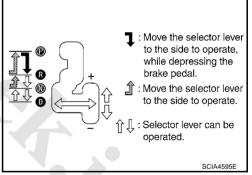

Control cable Nut Manual lever SCIA2001E

Checking of CVT Position

ACS00AKI

- 1. Place selector lever in "P" position, and turn ignition switch ON (engine stop).
- 2. Make sure selector lever can be shifted to other than "P" position when brake pedal is depressed. Also make sure selector lever can be shifted from "P" position only when brake pedal is depressed.
- 3. Move the selector lever and check for excessive effort, sticking, noise or rattle.
- 4. Confirm the selector lever stops at each position with the feel of engagement when it is moved through all the positions. Check whether or not the actual position the selector lever is in matches the position shown by the shift position indicator and the transaxle body.
- 5. The method of operating the lever to individual positions correctly should be as shown in the figure.
- 6. Confirm the back-up lamps illuminate only when lever is placed in the "R" position. Confirm the back-up lamps do not illuminate when the selector lever is pushed toward the "R" position side with the gear position remained in the "P" or "N" position.
- 7. Confirm the engine can only be started with the selector lever in the "P" and "N" positions.
- 3. Make sure transaxle is locked completely in "P" position.
- When selector lever is set to manual shift gate, make sure manual mode is displayed on combination meter.

Shift selector lever to "+" and "-" sides, and make sure set shift position changes.

SHIFT LOCK CONTROL UNIT INSPECTION TABLE

Shift lock control unit terminal data are reference values, measured between each terminal and ground.

Terminal (Wire color)	Item	Condition	Judgement standard
1 (R/Y)	Power source	Always	Battery voltage
2	Detention switch (for	When selector lever is not in "P" position with key inserted.	Battery voltage
(L)	key)	When selector lever is in "P" position with key inserted.	Approx. 0 V
3	Detention switch (for	When selector lever is not in "P" position.	Battery voltage
(L/W)	shift)	When selector lever is in "P" position.	Approx. 0 V
4	Cton lower quitab	When brake pedal is depressed	Battery voltage
(R/G)	Stop lamp switch	When brake pedal is released	Approx. 0 V
5 (V/W)	Vehicle speed signal (8pulse signal)	Speed meter is operated	Refer to DI-23, "Terminals and Reference Value for Unified Meter and A/C Amp."
6	Ignition switch: OFF	Approx. 0 V	
(G)	Ignition signal	Ignition switch: ON	Battery voltage
7 (R/L)	Shift lock solenoid	 When selector lever is in "P" position, brake pedal is depressed, and ignition switch is ON. When selector lever is not in "P" position, ignition switch is ON, and vehicle speed is 10 km/h (6 MPH) or less. For 3 minutes after selector lever is not in "P" position, vehicle speed is 10 km/h (6 MPH) or less, and ignition switch is ON → OFF. 	Approx. 0 V
		Except the above	Battery voltage
8 (B)	Ground	_	Approx. 0 V
9	Key lock solenoid	When selector lever is not "P" position.	Battery voltage for approx. 0.1 sec. (Note)
(V)		When selector lever is in "P" position.	Approx. 0 V
10	Kov uplack salanaid	When selector lever is in "P" position with ignition switch OFF.	Battery voltage for approx. 0.1 sec. (Note)
(W/B)	Key unlock solenoid	When selector lever is not in "P" position with ignition switch OFF.	Approx. 0 V

NOTE:

Take care that the pointer swings only momentarily because the output time is so short. If the inspection is done with an oscilloscope, it should be observed that the power source voltage lasts for 3.5 to 10 ms.

Revision: 2006 December

Component Inspection SHIFT LOCK SOLENOID

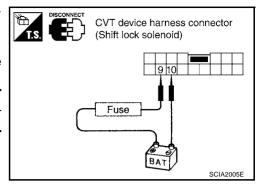

ACS00AK1

Check operation by applying battery voltage to the CVT device harness connector.

CAUTION:

Be sure to apply the voltage of the correct polarity to the respective terminals. Otherwise, the part may be damaged.

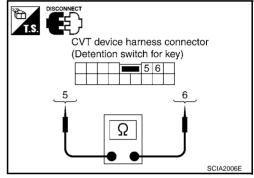

Connector	Terminal
M57	9 (Battery voltage) - 10 (Ground)

DETENTION SWITCH (FOR KEY)

Check continuity between terminals of the CVT device harness connector.

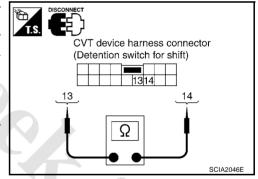

Condition	Connector	Terminal	Continuity
When selector lever is in "P" position.	M57	5 - 6	No
When selector lever is not in "P" position.			Yes

DETENTION SWITCH (FOR SHIFT)

Check continuity between terminals of the CVT device harness connector.

Condition	Connector	Terminal	Continuity
When selector lever is in "P" position.	M57	13 - 14	No
When selector lever is not in "P" position.	IVI57	13 - 14	Yes

KEY LOCK SOLENOID

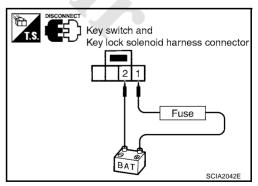

Key Lock

Check operation by applying battery voltage to key switch and key lock solenoid harness connector.

CAUTION:

Be careful not to cause burnout of the harness.

Connector	Terminal	
M28	1 (Battery voltage) - 2 (Ground)	

CVT SHYPT GOOR SYSTEM

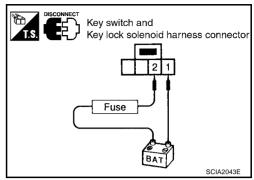

Key Unlock

Check operation by applying battery voltage to key switch and key lock solenoid harness connector.

CAUTION:

Be careful not to cause burnout of the harness.

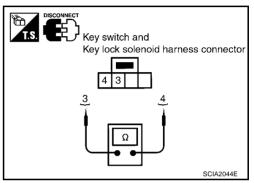

Connector	Terminal	
M28	2 (Battery voltage) - 1 (Ground)	

KEY SWITCH

Check continuity between terminals of the key switch and key lock solenoid harness connector.

Condition	Connector	Terminal	Continuity
Key inserted	M28	3 - 4	Yes
Key withdrawn			No

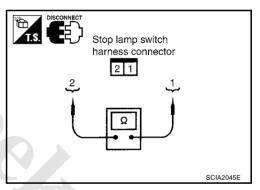

STOP LAMP SWITCH

Check continuity between terminals of the stop lamp switch harness connector.

Condition	Connector	Terminal	Continuity
When brake pedal is depressed	M114	1 - 2	Yes
When brake pedal is released			No

Check stop lamp switch after adjusting brake pedal.

DIFFERENTIAL STOPE OIL SEAL

DIFFERENTIAL SIDE OIL SEAL

PFP:33111

Removal and Installation COMPONENTS

ACS00AK3

1. Transaxle assembly

Revision: 2006 December

2. Differential side oil seal

REMOVAL

Refer to the figure above for differential side oil seals removal procedure.

CAUTION

Be careful not to scratch transaxle case.

DIFFERENTIAL STOCKOLL SEAL

INSTALLATION

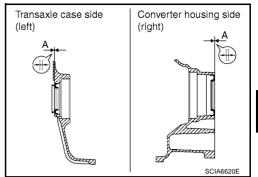

1. As shown below, use a drift to drive the differential side oil seal into the case until it is flush. Refer to dimensions A.

Unit: mm (in)

Dimensions A	0±0.5 (0±0.020)

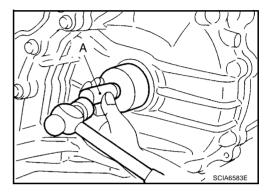

NOTE:

The differential side oil seal pulling direction is used as the reference

Drift to be used:

Location	Tool number: A
Transaxle case side (left)	ST33400001
Converter housing side (right)	KV40100621

CAUTION:

- Do not reuse differential side oil seals.
- When installing differential side oil seals, apply NISSAN CVT Fluid NS-2.
- 2. Reinstall any part removed.

CAUTION:

Revision: 2006 December

If lubricant leak has occurred, after finishing work, check fluid level. Refer to CVT-17, "Checking CVT Fluid".

CVT FLUID COOLER SYSTEM

PFP:21600

CVT Fluid Cooler Removal and Installation (For South Africa) COMPONENTS

ACS00AK4

- 1. CVT fluid cooler bracket
- 4. CVT fluid cooler bracket

Revision: 2006 December

- CVT fluid cooler hose (upper)
- 10. CVT fluid cooler hose (CVT fluid cooler bypass valve to transaxle)
- 2. Side member
- 5. Hose clamp
- 8. Hose clamp
- 11. CVT fluid cooler hose (lower)
- 3. Radiator core support (LH)
- 6. CVT fluid cooler hose (radiator to CVT fluid cooler bypass valve)
- . CVT fluid cooler bypass valve
- 12. CVT fluid cooler

Refer to GI section to make sure icons (symbol marks) in the figure. Refer to $\underline{\text{GI-8. "Components"}}$.

REMOVAL

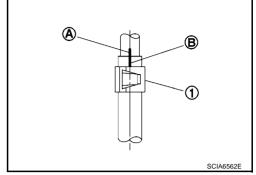

Refer to the figure above for CVT fluid cooler removal procedure.

CVT FLWID COOLER SYSTEM

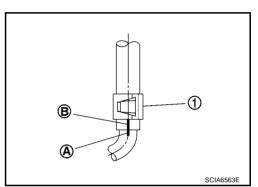

INSTALLATION

Note the following, and install in the reverse order of removal.

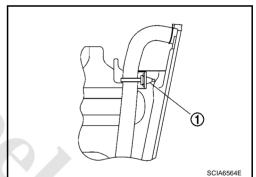

- Note the following instruction when inserting CVT fluid cooler hose (upper) into CVT fluid cooler.
- When inserting CVT fluid cooler hose (upper) into CVT fluid cooler, insert it so as to fit the paint mark (A).
- When inserting CVT fluid cooler hose (upper) into CVT fluid cooler, insert it with the paint mark (B) facing upward.
- Install a pawl of hose clamp (1) with it facing upward.

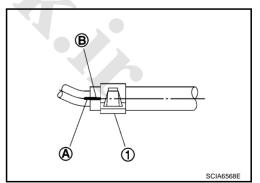

- Note the following instruction when inserting CVT fluid cooler hose (upper) into CVT fluid cooler bypass valve.
- When inserting CVT fluid cooler hose (upper) into CVT fluid cooler bypass valve, insert it so as to fit the paint mark (A).
- When inserting CVT fluid cooler hose (upper) into CVT fluid cooler, insert it with the paint mark (B) facing 45 degrees forward of the left side of the vehicle.
- Install a pawl of hose clamp (1) with it facing 45 degrees forward of the left side of the vehicle.

 Insert a clip (1) into bracket mounting hole, and fix CVT fluid cooler hose (upper) securely.

- Note the following instruction when inserting CVT fluid cooler hose (lower) into CVT fluid cooler.
- When inserting CVT fluid cooler hose (lower) into CVT fluid cooler, insert it so as to fit the paint mark (A).
- When inserting CVT fluid cooler hose (lower) into CVT fluid cooler, insert it with the paint mark (B) facing backward of the vehicle.
- Install a pawl of hose clamp (1) with it facing backward of the vehicle.

CVT FLWYD COOLER SYSTEM

- Note the following instruction when inserting CVT fluid cooler hose (lower) into CVT fluid cooler bypass valve.
- When inserting CVT fluid cooler hose (lower) into CVT fluid cooler bypass valve, insert it so as to fit the paint mark (A).
- When inserting CVT fluid cooler hose (lower) into CVT fluid cooler bypass valve, insert it with the paint mark (B) facing backward of the vehicle.
- Install a pawl of hose clamp (1) with it facing backward of the vehicle.

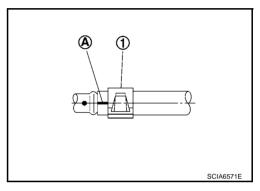

- Note the following instruction when inserting CVT fluid cooler hose (radiator to CVT fluid cooler bypass valve) into CVT fluid cooler bypass valve.
- When inserting CVT fluid cooler hose (radiator to CVT fluid cooler bypass valve) into CVT fluid cooler bypass valve, insert it to the two-stage bulge.
- When inserting CVT fluid cooler hose (radiator to CVT fluid cooler bypass valve) into CVT fluid cooler bypass valve, insert it with the paint mark (A) facing 45 degrees backward of the downside of the vehicle.
- Install a pawl of hose clamp (1) with it facing 45 degrees backward of the downside of the vehicle.

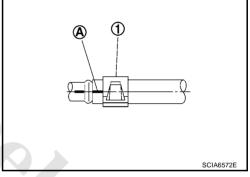

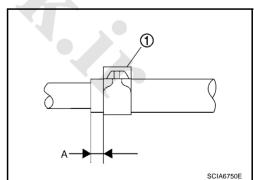

- When inserting CVT fluid cooler hose (CVT fluid cooler bypass valve to transaxle) into CVT fluid cooler bypass valve, insert it to the two-stage bulge.
- When inserting CVT fluid cooler hose (CVT fluid cooler bypass valve to transaxle) into CVT fluid cooler bypass valve, insert it with the paint mark (A) facing 45 degrees leftward of the downside of the vehicle.
- Install a pawl of hose clamp (1) with it facing 45 degrees leftward of the downside of the vehicle.
- Install hoses clamp on the position of 5 mm (0.20 in) from the edge of CVT fluid cooler hose.

Distance A: 5 mm (0.20 in)

 After completing installation, check for fluid leakage and fluid level. Refer to <u>CVT-17</u>, "<u>Checking CVT Fluid</u>".

- Heater hose

REMOVAL

Refer to the figure above for CVT fluid cooler valve removal procedure.

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure engine coolant escaping from the radiator.

CAUTION:

Perform when the engine is cold.

www.Vargeek.ir Revision: 2006 December Z50

Hose clamp

6.

CVT FLWYDVCOOER SYSTEM

INSTALLATION

Note the following, and install in the reverse order of removal.

 After completing installation, check for engine coolant leakage, engine coolant level, and the positions of CVT. Refer to CVT-137, "Checking of CVT Position".

CAUTION:

- Install hose clamp with tabs aligned with markings of CVT fluid cooler valve assembly and each hose.
- Do not reuse CVT fluid cooler inlet tube assembly and CVT fluid cooler outlet tube assembly.
- Apply LLC around O-ring when installing CVT fluid cooler inlet tube and CVT fluid cooler outlet tube assembly to CVT fluid cooler valve assembly.

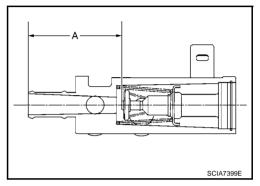

COMPONENT INSPECTION

 Make sure that CVT fluid cooler valve is fully opened at room temperature.

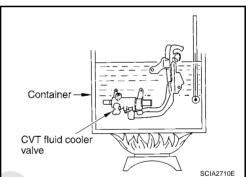

Standard

Dimension A from CVT fluid cooler valve port end to tip of valve shaft (At room temperature):

Approx. 72.0 mm (2.835 in) or more

2. Put CVT fluid cooler valve into a water-filled container, and then heat it up to 82°C (180°F) or more for 10 minutes or more.

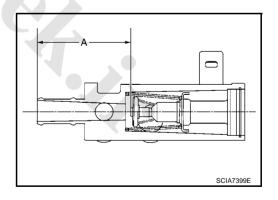

3. Make sure that CVT fluid cooler valve is fully closed.

Standard

Dimension A from CVT fluid cooler valve port end to tip of valve shaft (When heating to 82°C (180°F) or more for 10 minutes or more):

Approx. 66.5 mm (2.618 in) or less

TRANSAXPERASSEMBLY

REMOVAL

Remove transaxle assembly. Refer to the followings and the figure.

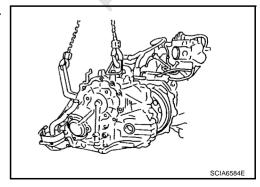

CAUTION:

- The transaxle assembly itself cannot be removed from the vehicle. Remove the transaxle assembly and engine assembly together from the vehicle.
- The crankshaft should be rotated clockwise (viewed from the front of the engine) when rotating crankshaft and removing tightening nuts of drive plate and torque converter.
- Be sure to replace the differential side oil seal with new one at the every removal of drive shaft.
 Refer to CVT-146, "Removal and Installation".
- Be sure to replace the differential side oil seal with new one (converter housing side only) at the every removal of transfer. Refer to <u>CVT-146</u>, "Removal and Installation".
- Refer to the followings when removing crankshaft position sensor.
- Do not subject it to impact by dropping or hitting it.
- Do not disassemble.
- Do not allow metal filings, etc., to get on the sensor's front edge magnetic area.
- Do not place in an area affected by magnetism.
- The followings are the procedure for removing transaxle assembly from engine assembly.
- 1. Install slinger to transaxle assembly.

Remove transaxle assembly from engine assembly with a hoist.CAUTION:

Secure torque converter to prevent it from dropping.

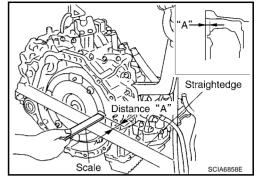

TRANSAX PETASSEMBLY

INSPECTION

Installation and Inspection of Torque Converter

 After inserting a torque converter to a transaxle, be sure to check distance "A" to ensure it is within the reference value limit.

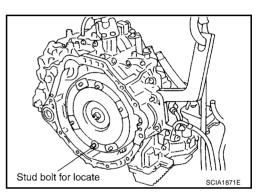

Distance "A": 14.0 mm (0.55 in) or more

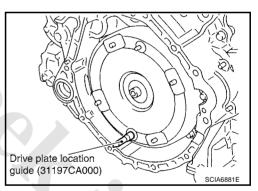

INSTALLATION

Note the following, and install in the reverse order of removal.

 Set and screw in the drive plate location guide onto the stud bolts for the torque converter locate.

Rotate the torque converter for the locate to go down.

 Rotate the drive plate for the hole of the drive plate locate to go down.

TRANSMXCERESEMBLY

Install transaxle assembly to engine assembly with a hoist.

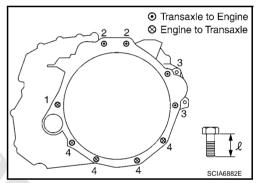

When installing fluid cooler tube to transaxle assembly, assemble the part with the tube aligned with the rib.

 When installing transaxle to the engine, attach the fixing bolts in accordance with the following standard.

Bolt No.	1	2	3	4
Number of bolts	1	2	2	4
Bolt length " ℓ "mm (in)	52 (2.05)	36 (1.42)	105 (4.13)	35 (1.38)
Tightening torque N·m (kg-m, ft-lb)	75 (7.7, 55)			47 (4.8, 35)

 Align the positions of tightening nuts for drive plate with those of the torque converter, and temporarily tighten the nuts. Then, tighten the nuts with the specified torque.

: 51 N·m (5.2 kg-m, 38 ft-lb)

CAUTION:

- Do not reuse O-ring and copper washers.
- When turning crankshaft, turn it clockwise as viewed from the front of the engine.
- When tightening the tightening nuts for the torque converter after fixing the crankshaft pulley bolts, be sure to confirm the tightening torque of the crankshaft pulley mounting bolts. Refer to EM-40, "Tightening Torque".
- After converter is installed to drive plate, rotate crankshaft several turns and check to be sure that transaxle rotates freely without binding.
- Install crankshaft position sensor (POS). Refer to EM-6, "OIL PAN AND OIL STRAINER".
- After completing installation, check for fluid leakage, fluid level, and the positions of CVT. Refer to CVT-17, "Checking CVT Fluid", CVT-137, "Adjustment of CVT Position", CVT-137, "Checking of CVT Position".
- When replacing the CVT assembly, erase EEP ROM in TCM. Refer to <u>CVT-12</u>, "<u>Precautions for TCM and CVT Assembly Replacement</u>".

SERVICE DATAWAND SPECIFICATIONS (SDS)

General Specifications ACS00AK8 VQ35DE engine Applied model 4WD CVT model RE0F09A CVT assembly 1XD16 Model code number D range Variable 1.766 Transmission gear ratio Reverse Final drive 5.173 Recommended fluid Genuine NISSAN CVT fluid NS-2*1 Fluid capacity 9.8 liter (8-5/8 Imp qt)

CAUTION:

• Use only Genuine NISSAN CVT fluid NS-2. Do not mix with other fluid.

SERVICE DATA AND SPECIFICATIONS (SDS)

• Using CVT fluid other than Genuine NISSAN CVT fluid NS-2 will deteriorate in driveability and CVT durability, and may damage the CVT, which is not covered by the warranty.

Vehicle Speed at Which Gear Shifting Occurs

Numerical value data are reference values.

Engine type Throttle position	Throttle position	Shift pattern	Engine speed (rpm)	
	Shift pattern	At 40 km/h (25 MPH)	At 60 km/h (37 MPH)	
VQ35DE	8/8	"D" position	2,800 - 4,300	3,900 - 5,300
	2/8	"D" position	1,200 - 2,000	1,300 - 2,100

CAUTION:

Lock-up clutch is engaged when vehicle speed is approximately 18 km/h (11 MPH) to 90 km/h (56 MPH).

Stall Speed

Stall speed 2,700 - 3,250 rpm

Engine	Engine speed	Line pressure kPa (bar, kg/cm², psi)
	At idle speed	"R", "D" positions 750 (7.50, 7.65, 108.8)
